Interview Questions on Function

✓ Core Python (Functions, Files, Strings, etc.)

1. Write a function to find the **largest prime factor** of a number.
2. Write a function to **calculate factorial** using recursion.
3. Explain **different types of function arguments** in Python (positional, keyword, default, variable-length) with examples.
4. Write a Python function to find whether a **binary representation of a number is a palindrome**.
5. Write a function that accepts a number and returns the **sum of its odd factors**.
6. Write a function to **find the most frequent character** in a string and its count.
7. Write a Python program to **open a file and write user input** into it using a function.
8. Write a function to **rename a file** and open the **current working directory** using `os` module.
9. Write a Python function to check if **all digits of a number divide it** (e.g., 128 → True).

10. Write a function that accepts a string and **replaces whitespaces with underscores** and vice versa.
11. Write a Python function to **convert `yyyy-mm-dd` to `dd-mm-yyyy`** format using `datetime`.
12. Write a function that finds all **words starting with 'a' or 'e'** in a given string.
13. Write a function to **copy only odd-numbered lines** from one file to another.
14. Write a Python function to **reverse a string without using built-in reverse functions**.
15. Write a Python function to demonstrate the use of `*args` and `**kwargs`.
